Welcome

Congratulations! You have in your hands the most advanced diet available anywhere, at any price. It is the most individualized program available for losing fat. This diet will not work effectively for anyone else because it has been created just for you, using your LBM, your job, your lifestyle and your daily plan for exercise & activities.

How we did it. We determined your lean weight using sophisticated body composition testing. Then you told us about your job, lifestyle, exercise and activities. With this information, the computer generated this five-page report. Included is your ultrasound body composition report that I call your Lean Body Analysis, your body composition history and the last two pages are your custom designed diet.

Lean Body Analysis

Page two is the results of your body composition test. Although very few people want to know how fat they are, all of them want to how to lose fat. Our Lean Body Analysis page includes a breakdown of your current body composition with an emphasis on the good stuff. LBM (lean body mass) is used by the computer to calculate your metabolic rate (RMR). In addition, the Lean Body Analysis projects appropriate weight goals based on your current lean body mass.

Food Plan

Page four is your custom-designed diet. How much food you need each day depends on how much LBM you have, your job, lifestyle and the type and amount of exercise you participate in. Based on the information you provide, this diet gives you the amount of protein, carbohydrates and fat you need per day to lose fat. It also tells you how much fat you can lose in eight weeks. And it shows you what your body requires at rest (your resting metabolic rate), for your workday and for one hour of each type of exercise.

Servings

Page five is the servings page. No need to count calories or macros in this diet. The computer breaks down all the information from the table on page four and shows you the number of servings you need daily to have maximum strength & energy and to lose fat as fast as possible.

Lean Body Analysis

Height: 66 inches Sex: FEMALE Thigh: 25 mm Waist: 25 mm Age: 28 years of experience

--TODAY--

LEAN	61.78 %	113.7 lbs.
FAT	38.22 %	70.3 lbs.
TOTAL	100.00 %	184.0 lbs.

EXTREME	HEALTHY	AVERAGE	BORDERLINE	AT RISK
9%-13.99%	14%-20.99%	21%-25.99%	26%-31.99%	Over 32 +%

According to the American Council on Exercise you are at risk based on your current fat percentage.

How much fat is right for each individual is a personal choice. How you look in the mirror is the only true judge of whether you have fat to lose. If you see more fat than you personally want, then exercise and follow your this plan until you reach your desired goals.

A female your height in good condition has 106 pounds or more of lean body weight.

CONGRATULATIONS! Your LBM is at or above the desirable amount. Even so, it's a good idea to exercise at least twice a week. If you want to gain lean or maybe just tone and shape your body, do so by participating in a weight-training program two to three times a week under the guidance of an experienced trainer. The table below tells us what you would weigh for the different health categories based on your current Lean Body Mass. Increasing or decreasing your LBM would increase or decrease the suggested body weight accordingly. For maximum success, feed your body properly. This diet will show you how much food you need daily for maximum results.

EXTREME	HEALTHY	AVERAGE	BORDERLINE	AT RISK
125-130 lbs.	131-143 lbs.	143-152 lbs.	153-166 lbs.	167 lbs. or more

Continue to monitor your body composition using Lean Body Analysis every 6 to 8 weeks to make sure you are losing only fat and not lean! If you want to lose fat, do so by following this diet as closely as you can. This plan allows you to lose all the fat you want to lose while increasing your strength & energy.

Food Plan

The following food program contains a sophisticated calculation that is based on your individual lean body mass (LBM), and on your activities. This is the most individualized food program available for losing fat and getting more energy.

In eight weeks, you could safely lose 11.0 pounds of fat. On your information sheet, you indicated you plan to exercise a total of 6.00 hour(s) per week. 3.00 hour(s) of weight training, 0.00 hour(s) of cardiovascular activities, 3.00 hour(s) of fat-burning activities

	TODAY		EIGHT WEEK GOAL		
LEAN	61.78%	113.7 lbs.	65.71%		113.7 lbs.
FAT	38.22%	70.3 lbs.	-11.0 lbs. of fat	34.29%	59.3 lbs.
TOTAL	100.00%	184.0 lbs.	100.00%		173.0 lbs.

You project to lose an average of 1.3 pounds of fat per week. In addition, you could gain lean weight. Gaining lean weight will increase your strength and energy and offset your fat loss.

How much food you need each day depends on how much LBM you have. Also, it depends on your activity level and the type and amount of exercise you participate in. Based on the information you provided, the following table gives you the number of calories and the amount of protein, carbohydrates and fat you need per day to maintain your fat or to reduce body fat. Also listed is what your body requires at rest (your resting metabolic rate), for your workday and for one hour of each type of exercise.

	PROTEIN		CARBS		FATS		TOTAL
	grams	calories	grams	calories	grams	calories	calories
Maintain current fat %	71	284	219	876	115	1,032	2,192
Reduce current fat %	71	284	219	876	44	392	1,552
Resting(RMR)	44	177	78	310	80	723	1,211
Workday (1.5a)	25	98	90	359	27	245	702
Weight Training	9	34	96	385	3	29	448
Cardiovascular Activities	3	14	88	351	16	144	509
Fat Burning Activities	5	18	54	217	22	201	436

Food List

Protein & Dairy

Chicken breast	78g
Cod	105g
Cottage cheese, 1%	219g
Cottage cheese, 2%	219g
Cottage cheese, nonfat	234g
Egg whites (extra large)	6 whites
Egg whites (small)	9 whites
Eye of round	81g
Greek yogurt, lowfat	240g
Lean ground beef (ground round)	81g
Plain Greek yogurt, nonfat	234g
Ricotta, nonfat	210g
Shrimp	99g
Sirloin steak	81g
Tilapia	93g
Tuna (canned)	102g
Turkey breast	84g
Yogurt, plain, nonfat	420g

Protein Tips

You should eat the protein servings in equal amounts a minimum of three times throughout the day. The Eat to Lose Fat food plan suggests a practical way to break down the protein servings. The servings are divided fairly even among breakfast, lunch, and dinner.

The protein group includes meat, fish, poultry, and dairy products. We recommend you eat at least one-third of your daily protein servings from the dairy section. We strongly recommend eating the daily servings to ensure calcium intake.

It is not necessary to use any meat products on this program. If you do not eat meat, you should use egg whites and other dairy products.

Measure your serving size after cooking.

Grains & Starches

Bagel	84g
Beans (any on list)	177g
Cheerios	57g
Corn grits	54g
Corn, sweet	195g
Cream of Wheat (dry)	54g
English muffin	96g
Farina (dry)	54g
French bread	81g
Hard roll	81g
Mixed peas and carrots	420g
Multigrain bread	96g
Oatmeal (dry)	63g
Pasta (cooked)	168g
Pasta, whole wheat (cooked)	159g
Peas, green	270g
Peas, split	204g
Pita (pocket)	75g
Popcorn (air popped)	54g
Potato, baked (with skin)	198g
Potato, boiled	210g
Quinoa (cooked)	198g
Rice, brown (cooked)	180g
Rice, white (cooked)	150g
Rye bread	87g
Sweet potato	204g
Tortilla, corn (6-inch)	93g
Tortilla, whole wheat	93g
Whole wheat bread	102g
Whole wheat roll	81g

Grains/Starches Tips

Although this amount may seem like too much for some people, its not. Eating fewer quality carbohydrates reduces only your energy, not your fat.

If you have low energy, then you don't eat enough energy food. Grains and starches (complex carbohydrates) are your energy foods.

Again, the Eat to Lose Fat food plan spreads the total Grains/Starches servings across the three major meals.

Hot cereals are measured dry. Add the amount of water you want.

Food List

Vegetables

Asparagus (cooked)	256g
Asparagus (raw)	256g
Bell peppers, orange (cooked)	149g
Bell peppers, orange (raw)	167g
Bell peppers, red (cooked)	149g
Bell peppers, red (raw)	167g
Bell peppers, yellow (cooked)	149g
Bell peppers, yellow (raw)	167g
Broccoli (cooked)	139g
Broccoli (raw)	152g
Carrots (cooked)	122g
Carrots (raw)	104g
Cauliflower (cooked)	244g
Cauliflower (raw)	200g
Cucumbers (raw)	278g
Green beans (cooked)	143g
Green beans (raw)	143g
Mushrooms, white (cooked)	189g
Mushrooms, white (raw)	303g
Spinach (cooked)	263g
Spinach (raw)	278g
Squash, summer (yellow) (raw)	294g
Squash, winter (hubbard) (raw)	115g
Squash, zucchini (raw)	323g
Tomatoes (cooked)	250g
Tomatoes (raw)	256g

Veggie Tips

Do not be concerned about the one veggie serving. You can always eat more vegetables whenever you choose.

Vegetable juices of any kind are not recommended. Fresh, raw vegetables are the only kind for maximum health.

To make a salad, you could use one-third serving of lettuce (2 1/2 cups), one-third serving of fresh mushrooms (1 cup), and throw in one-third serving of fresh tomatoes (1/2 medium).

This would equal one veggie serving. You may use any vegetables on the list to make your salad.

Measure your serving size after cooking.

Fruit

Apples (raw)	130g
Bananas (raw)	79g
Blueberries (raw)	124g
Cantaloupe (raw)	220g
Clementines (raw)	150g
Dried plums (pitted prunes)	28g
Grapes (raw)	99g
Pineapple (raw)	137g
Strawberries (raw)	234g
Tangerines (raw)	135g
Watermelon (raw)	237g

Fruit Tips

Juices and dried fruit are not recommended for fast fat loss.

Fruits are the perfect between meal snack. Eat only fresh, raw fruit.

Have your fruit snacks cleaned and ready to go every day. Put all the fruit you need for a day in a resealable plastic bag or reusable container. This makes it easy and convenient to eat.
