Welcome

Congratulations! You have in your hands the most advanced diet available anywhere, at any price. It is the most individualized program available for losing fat. This diet will not work effectively for anyone else because it has been created just for you, using your lean body mass (LBM), your job, your lifestyle, and your weekly plan for weight training (WT), high heart rate aerobic activity (HHT), and low heart rate aerobic activity (LHR).

How we did it. We determined your lean weight using sophisticated body composition testing. Then you told us about your job, lifestyle, and exercise hours. With this information, the computer generated this report. Included is your ultrasound body composition report that I call your Lean Body Analysis, and the following pages are your custom-designed diet.

Lean Body Analysis

Page two is the results of your body composition test. Although very few people want to know how fat they are, all of them want to know how to lose fat. Our Lean Body Analysis page includes a breakdown of your current body composition with an emphasis on the good stuff. Lean body mass (LBM) — everything in you except fat — is used by the computer to calculate your resting metabolic rate (RMR), the calories your body burns at rest. The Lean Body Analysis also projects appropriate weight goals based on your current lean body mass.

Food Plan

Page three is your custom-designed food plan. We use your body composition information to determine your LBM (lean body mass), then factor in your job, your day-to-day pace, and how many hours per week you spend on weight training (WT), high heart rate aerobic work (HHT) such as running or hard cardio, and low heart rate aerobic work (LHR) such as walking or easy cycling. The page shows how much fat you can lose in eight weeks, compares your body today with your eight-week goal, and explains what happens when protein, carbohydrates, or fat are too high or too low — so the servings on the next page make sense without counting grams.

Servings

Page four is the servings page. No need to count calories or macronutrients (protein, carbohydrates, and fat) yourself. The computer turns everything from page three into daily servings divided across breakfast, lunch, dinner, and snacks — so you have maximum strength and energy while losing fat as fast as this plan allows.

Lean Body Analysis

Height: 66 inches Sex: FEMALE Thigh: 25 mm Waist: 25 mm Age: 28 years of experience

--TODAY--

Lean weight 113.7 lbs 61.78% of you	Fat weight 70.3 lbs 38.22% of you	Total weight 184.0 lbs on the scale today
--	--	--

Extreme	Healthy	Average	Borderline	At Risk
9%-13.99%	14%-20.99%	21%-25.99%	26%-31.99%	Over 32 +%

According to the American Council on Exercise you are at risk based on your current fat percentage.

How much fat is right for each individual is a personal choice. How you look in the mirror is the only true judge of whether you have fat to lose. If you see more fat than you personally want, then exercise and follow your this plan until you reach your desired goals.

A female your height in good condition has 106 pounds or more of lean body weight.

CONGRATULATIONS! Your LBM is at or above the desirable amount. Even so, it's a good idea to exercise at least twice a week. If you want to gain lean or maybe just tone and shape your body, do so by participating in a weight-training program two to three times a week under the guidance of an experienced trainer. The table below tells us what you would weigh for the different health categories based on your current Lean Body Mass. Increasing or decreasing your LBM would increase or decrease the suggested body weight accordingly. For maximum success, feed your body properly. This diet will show you how much food you need daily for maximum results.

Extreme	Healthy	Average	Borderline	At Risk
125-130 lbs.	131-143 lbs.	144-152 lbs.	153-167 lbs.	167 lbs. or more

Continue to monitor your body composition using Lean Body Analysis every 6 to 8 weeks to make sure you are losing only fat and not lean! If you want to lose fat, do so by following this diet as closely as you can. This plan allows you to lose all the fat you want to lose while increasing your strength & energy.

Food Plan

Lose 11.0 lbs of fat in 8 weeks

Your eight-week fat-loss target from the Burn Engine, based on your lean body mass, job, lifestyle, and weekly exercise hours.

Lean body mass (LBM) 113.7 lbs	Weight training (WT) 3.00 hours per week	High heart rate aerobic (HHT) 0.00 hours per week	Low heart rate aerobic (LHR) 3.00 hours per week
--	--	---	--

Job: Mostly sitting · Day-to-day pace: Comfortable · Workday activity level: 1.5 — how much energy a typical workday adds above resting (higher means more physical work or stress; set from your job and day-to-day pace answers)

We use your body composition information to determine your LBM (lean body mass) — the weight of everything in your body except fat, mostly muscle and organs. The computer uses your LBM to set your protein needs and your metabolic rate. You also told us how you work and train: weight training (WT), high heart rate aerobic activity (HHT) such as running or hard cardio, and low heart rate aerobic activity (LHR) such as walking or easy cycling. Those hours, together with your job and lifestyle, are the inputs that build your food plan and your servings on the next page.

If you follow this plan for eight weeks, the table compares your body today with where you project to be. Lean mass is muscle and organs; body fat is stored fat; total weight is what the scale shows.

	Today		Change	8-week goal	
Lean mass	61.78%	113.7 lbs.		65.71%	113.7 lbs.
Body fat	38.22%	70.3 lbs.	" 11.0 lbs.	34.29%	59.3 lbs.
Total weight	100.00%	184.0 lbs.		100.00%	173.0 lbs.

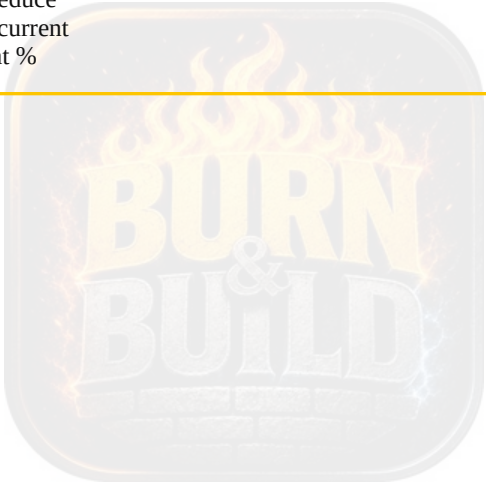

On this plan you project to lose about 1.3 pounds of fat per week on average. Macronutrients — protein, carbohydrates, and fat — are the three main parts of food that supply calories and shape body composition. The table below is not a food list; it explains what happens when each macro is too high or too low. That is why your daily servings on the next page are set the way they are: so you stay in the right range without counting grams yourself.

Macro	Too much	Too little
Protein	Gain fat	Lose lean body mass (muscle)
Carbohydrates	Gain fat	Lose energy between meals
Fat	Gain fat	Slow fat loss

Servings

NOTE: Always consult your physician before starting this plan or making any change in your eating habits.

	Daily	Breakfast	Snack	Lunch	Snack	Dinner	Snack
Protein	9	3		3		3	
Grains/Starches	9	3		3		3	
Veggies	1						
Fruits	3		1		1		1
Extra Fats	18	To maintain your current fat %					
	0	To reduce your current fat %					

Food List

Protein Staples

1% milk	235g
Chicken breast	26g
Cod	35g
Cottage cheese, 1%	73g
Cottage cheese, 2%	73g
Cottage cheese, nonfat	73g
Egg whites (extra large)	2 whites
Egg whites (small)	3 whites
Eye of round	25g
Greek yogurt, lowfat	84g
Lactose-free skim milk	237g
Lean ground beef (ground round)	27g
Plain Greek yogurt, nonfat	78g
Ricotta, nonfat	73g
Shrimp	33g
Sirloin steak	28g
Skim milk	237g
Tilapia	31g
Tuna (canned)	34g
Turkey breast	28g
Yogurt, plain, nonfat	140g

Grains & Starches

Bagel	25g
Beans (any on list)	66g
Cheerios	19g
Corn grits	23g
Corn, sweet	17g
Cream of Wheat (dry)	19g
English muffin	31g
Farina (dry)	19g
French bread	25g
Hard roll	23g
Mixed peas and carrots	139g
Multigrain bread	29g
Oatmeal (dry)	22g
Pasta (cooked)	61g
Pasta, whole wheat (cooked)	61g
Peas, green	83g
Peas, split	126g
Pita (pocket)	24g
Popcorn (air popped)	36g
Potato, baked (with skin)	86g
Potato, boiled	96g
Quinoa (cooked)	66g
Rice, brown (cooked)	55g
Rice, white (cooked)	58g
Rye bread	27g
Squash, summer (yellow)	325g
Squash, winter (hubbard)	160g
Squash, zucchini	479g
Sweet potato	55g
Tortilla, corn (6-inch)	31g
Tortilla, whole wheat	19g
Whole wheat bread	29g
Whole wheat roll	27g

Food List

Vegetables

Asparagus (cooked)	244g
Asparagus (raw)	256g
Bell peppers, orange (cooked)	118g
Bell peppers, orange (raw)	117g
Bell peppers, red (cooked)	159g
Bell peppers, red (raw)	167g
Bell peppers, yellow (cooked)	159g
Bell peppers, yellow (raw)	159g
Broccoli (cooked)	139g
Broccoli (raw)	152g
Carrots (cooked)	122g
Carrots (raw)	104g
Cauliflower (cooked)	244g
Cauliflower (raw)	200g
Cucumbers (raw)	278g
Green beans (cooked)	141g
Green beans (raw)	141g
Mushrooms, white (cooked)	189g
Mushrooms, white (raw)	303g
Spinach (cooked)	263g
Spinach (raw)	278g
Tomatoes (cooked)	250g
Tomatoes (raw)	256g

Fruit

Apples (raw)	130g
Bananas (raw)	79g
Blueberries (raw)	124g
Clementines (raw)	150g
Grapes (raw)	99g
Pineapple (raw)	137g
Strawberries (raw)	234g
Tangerines (raw)	135g
Watermelon (raw)	237g

Flavor Kits

Fire

- Chili powder
- Cumin
- Garlic powder
- Salt
- Black pepper

Iron

- Salt
- Black pepper
- Garlic powder
- Onion powder

Green

- Lemon pepper
- Garlic
- Dried basil

Earth

- Sage
- Thyme
- Black pepper
- Mustard powder

Splashes

- Low-sodium soy sauce
- Mustard
- Salsa
- Vinegar
- Hot sauce
- Lemon juice
- Lime juice

Pantry

- Cooking spray
- Nonstick foil
- Coffee
- Tea
- Zero-calorie beverages

Flavor kits don't count toward protein or G/S servings.

Splashes are liquids used while cooking — normal amounts, not a beverage.
