Welcome

Congratulations. You have in your hands a food plan built only for you.

You answered questions about your body, your job, and the exercise you plan to do over the next eight weeks. This page shows what we asked, why we asked it, and where each answer shows up in your report.

Every number in the pages ahead came from information you provided. That is why this plan will not work the same for anyone else.

Your weight and body fat

You told us you weigh 184 lbs and your body fat is about 38.2%.

We use those two numbers to find your lean body mass — the part of your body that is not fat (muscle, organs, and bone). That number tells us how much fuel your body needs each day.

See: Lean Body Analysis — your lean weight is 113.7 lbs. Lean, fat, and total breakdown start there.

Your height and sex

You are 5 ft 6 in, female.

Healthy lean-weight ranges and body-fat reference charts differ for men and women and for different builds.

See: Lean Body Analysis — reference ranges and whether your lean weight is in a strong place for your height.

Your job

You said your work is mostly sitting, with a comfortable day-to-day pace.

A desk job burns less fuel during the day than being on your feet or lifting. How demanding your typical workday is changes how much food you need.

See: Food Plan — your workday is part of how your daily food targets were calculated.

Your exercise — next 8 weeks

You plan 3 hours of weight training, 0 hours of vigorous cardio, 3 hours of fat-burning activity per week.

We only count exercise you will actually do. More movement raises what you need to eat to lose fat without losing energy. Overstating exercise gives you too little food and makes the plan harder to follow.

See: Food Plan — your exercise hours are listed there and helped set your daily targets.

What that became

The Burn Engine combined your lean body mass, your job, and your exercise into daily food targets.

Then we turned those targets into servings — protein, grains, vegetables, fruits, and fats — so you do not have to count calories.

See: Servings — 9 protein, 9 grains/starches, 1 vegetables, 3 fruits (plus fats). Those are your numbers for each day.

Your approved food list and menu planner are online in Print Shop. This report explains why your numbers are yours. The food list shows what you can eat to hit them.

START HERE

- ➊ Read this report once.
- ➋ Print your Servings page and post it where you will see it.
- ➌ Build meals from the food list in Print Shop.
- ➍ Use the menu planner to track servings through the week.
- ➎ Stay consistent for 8 weeks.

Steps to Success

Congratulations — you have the most individualized fat-loss program available, built from your lean body mass, workday, lifestyle, and exercise plan. These steps show you how to use it for maximum results.

1 Know your numbers

Review your Lean Body Analysis. Your LBM drives your metabolic rate and your daily food prescription. The mirror — not the scale alone — tells you whether you have fat to lose.

2 Eat your servings

Follow the daily serving totals on your Servings page. No calorie or macro counting — the computer already did that work. Stay within the approved food groups.

3 Plan your week

Use the menu planner online to assign foods to each meal, track servings, and build your grocery list. Print your week at a glance from Print Shop before you shop.

4 Eat on schedule

Spread protein through breakfast, lunch, and dinner. Eat vegetables at dinner and fruit at snack times. Regular feedings keep energy steady and protect lean mass.

5 Stay consistent

Keep your exercise and activity aligned with what you reported when this plan was built. Changing workouts without updating your program can slow fat loss.

6 Check in regularly

Re-test body composition every 6 to 8 weeks. You want to confirm you are losing fat — not lean. Adjust only after you know what the numbers say.

For detailed guidance, open Print Shop from the menu planner — For Best Results, the food list, and Frequently Asked Questions.

Lean Body Analysis

Height: 66 inches Sex: FEMALE Thigh: 25 mm Waist: 25 mm Age: 28 years of experience

--TODAY--

LEAN	61.78 %	113.7 lbs.
FAT	38.22 %	70.3 lbs.
TOTAL	100.00 %	184.0 lbs.

Extreme	Healthy	Average	Borderline	At Risk
9%-13.99%	14%-20.99%	21%-25.99%	26%-31.99%	Over 32 +%

According to the American Council on Exercise you are at risk based on your current fat percentage.

How much fat is right for each individual is a personal choice. How you look in the mirror is the only true judge of whether you have fat to lose. If you see more fat than you personally want, then exercise and follow your this plan until you reach your desired goals.

A female your height in good condition has 106 pounds or more of lean body weight.

CONGRATULATIONS! Your LBM is at or above the desirable amount. Even so, it's a good idea to exercise at least twice a week. If you want to gain lean or maybe just tone and shape your body, do so by participating in a weight-training program two to three times a week under the guidance of an experienced trainer. The table below tells us what you would weigh for the different health categories based on your current Lean Body Mass. Increasing or decreasing your LBM would increase or decrease the suggested body weight accordingly. For maximum success, feed your body properly. This diet will show you how much food you need daily for maximum results.

Extreme	Healthy	Average	Borderline	At Risk
125-130 lbs.	131-143 lbs.	144-152 lbs.	153-167 lbs.	167 lbs. or more

Continue to monitor your body composition using Lean Body Analysis every 6 to 8 weeks to make sure you are losing only fat and not lean! If you want to lose fat, do so by following this diet as closely as you can. This plan allows you to lose all the fat you want to lose while increasing your strength & energy.

Food Plan

The following food program contains a sophisticated calculation that is based on your individual lean body mass (LBM), and on your activities. This is the most individualized food program available for losing fat. In eight weeks, you could safely lose 11.0 pounds of fat. On your information sheet, you indicated you plan to exercise a total of 6.00 hour(s) per week. 3.00 hour(s) of weight training, 0.00 hour(s) of cardiovascular activities, 3.00 hour(s) of fat-burning activities

	TODAY			EIGHT WEEK GOAL	
LEAN	61.78%	113.7 lbs.		65.71%	113.7 lbs.
FAT	38.22%	70.3 lbs.	-11.0 lbs. of fat	34.29%	59.3 lbs.
TOTAL	100.00%	184.0 lbs.		100.00%	173.0 lbs.

You project to lose an average of 1.3 pounds of fat per week. In addition, you could gain lean weight. Gaining lean weight will increase your strength and energy and offset your fat loss.

How much food you need each day depends on how much LBM you have. Also, it depends on your activity level and the type and amount of exercise you participate in. Based on the information you provided, the following table gives you the number of calories and the amount of protein, carbohydrates and fat you need per day to maintain your fat or to reduce body fat. Also listed is what your body requires at rest (your resting metabolic rate), for your workday and for one hour of each type of exercise.

	grams	calories	grams	calories	grams	calories	calories
	PROTEIN		CARBS		FATS		TOTAL
Maintain current fat %	71	284	219	876	115	1,032	2,192
Reduce current fat %	71	284	219	876	44	392	1,552
Resting(RMR)	44	176	78	312	80	723	1,211
Workday (1.5a)	25	100	90	360	27	245	702
Weight Training	9	36	96	384	3	29	448
Cardiovascular Activities	3	12	88	352	16	144	509
Fat Burning Activities	5	20	54	216	22	201	436
