Welcome

Congratulations. You have in your hands a food plan built only for you.

You answered questions about your body, your job, and the exercise you plan to do over the next eight weeks. The pages ahead show what we asked, why we asked it, and what we built from your answers.

Every number in this report came from information you provided. That is why this plan will not work the same for anyone else.

Your weight and body fat

You told us you weigh 184 lbs and your body fat is about 38.2%.

We use those two numbers to find your lean body mass — the part of your body that is not fat. That number drives your daily food plan.

See: Your Body Today — lean, fat, and what those numbers mean.

Your height and sex

You are 5 ft 6 in, female.

Healthy ranges differ for men and women and for different builds.

See: Your Body Today — how your lean weight compares for your height.

Your job

You said your work is mostly sitting, comfortable day-to-day pace.

A desk job burns less fuel than being on your feet or lifting. Your workday changes how much food you need.

See: How Your Plan Was Built — your job is part of the calculation.

Your exercise — next 8 weeks

You plan 3 hours of weight training, 0 hours of vigorous cardio, 3 hours of fat-burning activity per week.

We only count exercise you will actually do. More movement raises what you need to eat to lose fat without losing energy.

See: How Your Plan Was Built — your exercise hours are listed there.

The next pages walk through your body numbers, your progress over time, how your plan was calculated, and your daily servings.

Your food list and menu planner are online in Print Shop.

START HERE

- ➊ Read this report once — start to finish.
- ➋ Print your Servings page and post it where you will see it.
- ➌ Build meals from the food list in Print Shop.
- ➍ Stay consistent for 8 weeks, then re-test.

Your Body Today

On the questionnaire you entered your weight and body fat percentage. Those two answers tell us what your body is made of right now.

Lean weight
113.7 lbs
61.78% of you

Fat weight
70.3 lbs
38.22% of you

Total weight
184.0 lbs
on the scale today

What is lean body mass?

Lean body mass is everything that is not fat — muscle, organs, bone, and water. It is the part of you that burns fuel. Your food plan is built from this number, not from total scale weight alone.

What you told us

You are female, 5 ft 6 in, 28 years old. You reported 184 lbs on the scale and 38.2% body fat.

From that, your lean weight is 113.7 lbs. That is the number the Burn Engine uses first.

Where you stand

According to the American Council on Exercise you are at risk based on your current fat percentage.

How much fat is right for you is a personal choice. How you look in the mirror is the best judge of whether you want to lose fat.

A female your height in good condition has 106 pounds or more of lean body weight.

CONGRATULATIONS! Your LBM is at or above the desirable amount.

Why this page matters

Your lean weight sets your base need for food. Your job and exercise (on the next pages) adjust that up or down. Together they become your daily servings.

Your Progress

If you have past body composition tests, they show more than a single number on a scale. They show whether you are losing fat, gaining lean, or both.

Your story in the records

Your earliest record in this report is from Jan 15, 2024. At that test you weighed about 184 lbs with 38.2% body fat and 113.7 lbs of lean weight.

Today you weigh 144 lbs with 32.0% body fat and 97.9 lbs of lean weight.

Compare lean weight, not just scale weight. The goal is to lose fat while keeping as much lean as you can.

Re-test every 6 to 8 weeks. You want to confirm you are losing fat — not lean.

Recent tests at a glance

Feb 19, 2013: 144 lbs, 97.9 lbs lean, 32.0% fat.

Mar 12, 2012: 138 lbs, 91.7 lbs lean, 33.5% fat.

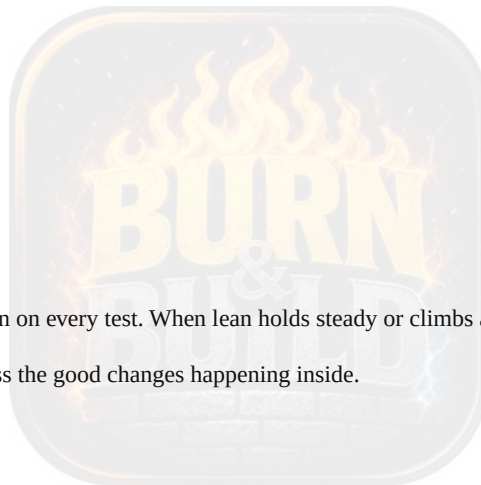

Dec 27, 2012: 146 lbs, 90.0 lbs lean, 38.4% fat.

Dec 28, 2011: 151 lbs, 92.4 lbs lean, 38.8% fat.

What to do with this

Use history to see direction, not to chase perfection on every test. When lean holds steady or climbs and fat falls, the plan is working.

If you only watch the bathroom scale, you can miss the good changes happening inside.

How Your Plan Was Built

Your food plan is not a generic diet. It is a calculation that starts with your lean body mass, then adds what you told us about your job and your exercise.

Step 1 — Start with lean weight

Your lean body mass is 113.7 lbs. The Burn Engine uses this as your starting point for how much fuel your body needs.

Step 2 — Add your workday

You said your work is mostly sitting, comfortable day-to-day pace. More movement and stress during the workday raises your daily need. Less movement lowers it.

Step 3 — Add your exercise

You plan 3 hours of weight training, 0 hours of vigorous cardio, 3 hours of fat-burning activity per week (6.00 total hours).

We count only active time — not rest between sets or scrolling on a treadmill.

Step 4 — Turn targets into servings

The computer calculated your daily food targets, then converted them into servings — protein, grains, vegetables, fruits, and fats.

You follow servings, not calories. The math is already done. Your job is to pick foods from the approved food list and hit your daily totals.

Your eight-week outlook

If you follow this plan closely, in eight weeks you could safely lose about 11.0 lbs of fat — roughly 1.3 lbs per week on average.

Today you weigh 184.0 lbs. Your eight-week target weight is about 173.0 lbs, with lean weight held at 113.7 lbs.

You may also gain a little lean weight as you train. That increases strength and energy and can offset some of what the scale shows.

Your Daily Servings

This is the page to print and use every day. These numbers are your plan — built from everything you told us on the questionnaire.

What is a serving?

A serving is a measured portion from an approved food group — not a vague "healthy choice." Each food on your food list tells you what counts as one serving.

Your daily totals

Your plan: 9 protein, 9 grains/starches, 1 vegetables, 3 fruits. Extra fats are listed separately on the grid below.

Spread protein through breakfast, lunch, and dinner. Eat vegetables at dinner. Eat fruit at snack times.

How to use this page

Open Print Shop for your food list and menu planner. Build meals that add up to these daily totals.

Stay consistent for eight weeks. If your exercise or job changes significantly, build a new program with updated answers.

Always consult your physician before starting this plan or making any change in your eating habits.

	Daily	Breakfast	Snack	Lunch	Snack	Dinner	Snack
Protein	9	3		3		3	
Grains/Starches	9	3		3		3	
Veggies	1						
Fruits	3		1		1		1
Extra Fats	18	To maintain your current fat %					
	0	To reduce your current fat %
