

Personalized exclusively for: Kristi Warner

On: January 15th, 2024

Welcome

Congratulations! You have in your hands the most advanced diet available anywhere, at any price. It is the most individualized program available for losing fat. This diet will not work effectively for anyone else because it has been created just for you, using your lean body mass (LBM), your job, your day to day, and your weekly plan for weight training (WT), high heart rate aerobic activity (HHT), and low heart rate aerobic activity (LHR).

How we did it. We determined your lean weight using sophisticated body composition testing. Then you told us about your job, day to day, and exercise hours. With this information, Burn & Build generated this report. Page two is your Lean Body Analysis, including your projected progress; the pages that follow are your food plan, servings, and food list.

Lean Body Analysis

Page two is the results of your body composition test. Although very few people want to know how fat they are, all of them want to know how to lose fat. Our Lean Body Analysis page includes your profile, a snapshot of where you are today, and a Projected Progress bar — where you are and where you are headed. Burn & Build uses your LBM (lean body mass) to calculate your metabolic rate (RMR). The bar shows appropriate weight goals for each leanness stage and projected body fat over time, based on your current lean body mass.

Food Plan

Page three is your custom-designed food plan. It explains why servings go a step farther than macros, how tracking macros can lead you astray, and the five steps for building each meal from your food list. The servings on page four follow directly from this page.

Servings

Page four is the servings page. Burn & Build turns everything from page three into daily servings divided across breakfast, lunch, dinner, and snacks so you have maximum strength and energy while losing fat as fast as this plan allows.

Food List

Pages five through seven are your food list. Page five lists protein, grains, and starches. Page six lists vegetables and fruit. Page seven lists tips and suggestions for using your food list. These foods were chosen from the bodybuilder cutting-diet staples used in Warner 1982 — foods that work in real prep. Each item is matched to Burn Engine serving rules and sized with USDA nutrition data so one serving delivers the protein, carbohydrate, or produce your plan calls for. The gram weights on your list are scaled to your daily servings from page four. Weigh your portions, stay inside your servings, and build meals from these approved foods.

Lean Body Analysis

HEIGHT	SEX	BODY COMP	AGE
66 in.	FEMALE	Skinfolds	28 years
TODAY			
	%		lbs.
LEAN	61.78%		113.7 lbs.
FAT	38.22%		70.3 lbs.
TOTAL	100.00%		184.0 lbs.

PROJECTED PROGRESS

WHERE YOU ARE. WHERE YOU'RE HEADED.

CONGRATULATIONS! Your LBM is at or above the desirable amount.

A female your height in good condition has 106 pounds or more of lean body weight. Lean body mass is everything in your body that is not fat — muscle, bone, organs, and fluids. It drives metabolism. Burn & Build is built to reduce fat while protecting that lean tissue. How much fat is right for you is a personal choice. How you look in the mirror is the only true judge of whether you're where you want to be.

Food Plan

Macros are considered to be the end all, be all, in the nutrition world. But knowing your macros still means you need to figure out what to eat. Since 1982 Burn & Build has been converting macros to servings using proven fat burning muscle building foods. For the best results you need a plan that goes a step farther than macros.

Protein, carbohydrates, and fat each support lean mass, energy, and fat loss.

The table below shows how tracking macros might lead you astray. Or answer this question. Are you puzzled why your exercising isn't working?

Burn & Build cuts the fine line between too much and too little and that's the secret to losing fat and building muscle on the same diet.

FOOD GROUPS	TOO MUCH	TOO LITTLE
PROTEIN	GAIN FAT	LOSE LBM (MUSCLE)
CARBOHYDRATES	GAIN FAT	LOSE ENERGY
FAT	GAIN FAT	LOSE FAT

Burn & Build converted the proteins and carbohydrates into servings from protein, dairy, grains, starches, veggies and fruits. All whole clean food choices. Each food on the list is sized to fit your needs. This program is customized to you and won't work for anyone else. And although it's not easy it is simple.

Step 1 Pull out your kitchen scale. Get one now for about \$50 on Amazon.

Step 2 Choose the protein food you want to eat. Put that amount on your plate. The plan uses grams because they are accurate down to the weight of a paper clip.

Step 3 Choose the grain or starch you want. Add the serving amount to your plate.

Step 4 Season as desired. No added fat, sugar or alcohol.

Step 5 Eat all the food you put on the plate.

Servings

Page three showed you how to build each meal — weigh your protein and grain or starch in grams, season without added fat, sugar, or alcohol, and eat everything on your plate. This page is your daily prescription: how many servings of each food group you need across breakfast, lunch, dinner, and snacks.

NOTE: Always consult your physician before starting this plan or making any change in your eating habits.

	Daily	Breakfast	Snack	Lunch	Snack	Dinner	Snack
Protein	9	3		3		3	
Grains/Starches	9	3		3		3	
Veggies	1						
Fruits	3		1		1		1
Extra fat, sugar and alcohol	18	To maintain your current fat %					
	0	To reduce your current fat %					

Food List

Protein Staples

1% milk	705g
Chicken breast	78g
Cod	105g
Cottage cheese, 1%	219g
Cottage cheese, 2%	219g
Cottage cheese, nonfat	234g
Egg whites (extra large)	6 whites
Egg whites (small)	9 whites
Eye of round	81g
Greek yogurt, lowfat	240g
Lactose-free skim milk	705g
Lean ground beef (ground round)	81g
Plain Greek yogurt, nonfat	234g
Ricotta, nonfat	210g
Shrimp	99g
Sirloin steak	81g
Skim milk	705g
Tilapia	93g
Tuna (canned)	102g
Turkey breast	84g
Yogurt, plain, nonfat	420g

Grains & Starches

Bagel	84g
Beans (any on list)	177g
Cheerios	57g
Corn grits	54g
Corn, sweet	195g
Cream of Wheat (dry)	54g
English muffin	96g
Farina (dry)	54g
French bread	81g
Hard roll	81g
Mixed peas and carrots	420g
Multigrain bread	96g
Oatmeal (dry)	63g
Pasta (cooked)	168g
Pasta, whole wheat (cooked)	159g
Peas, green	270g
Peas, split	204g
Pita (pocket)	75g
Popcorn (air popped)	54g
Potato, baked (with skin)	198g
Potato, boiled	210g
Quinoa (cooked)	198g
Rice, brown (cooked)	180g
Rice, white (cooked)	150g
Rye bread	87g
Sweet potato	204g
Tortilla, corn (6-inch)	93g
Tortilla, whole wheat	93g
Whole wheat bread	102g
Whole wheat roll	81g

Food List

Vegetables

Asparagus (cooked)	256g
Asparagus (raw)	256g
Bell peppers, orange (cooked)	149g
Bell peppers, orange (raw)	167g
Bell peppers, red (cooked)	149g
Bell peppers, red (raw)	167g
Bell peppers, yellow (cooked)	149g
Bell peppers, yellow (raw)	167g
Broccoli (cooked)	139g
Broccoli (raw)	152g
Carrots (cooked)	122g
Carrots (raw)	104g
Cauliflower (cooked)	244g
Cauliflower (raw)	200g
Cucumbers (raw)	278g
Green beans (cooked)	143g
Green beans (raw)	143g
Mushrooms, white (cooked)	189g
Mushrooms, white (raw)	303g
Spinach (cooked)	263g
Spinach (raw)	278g
Squash, summer (yellow) (raw)	294g
Squash, winter (hubbard) (raw)	115g
Squash, zucchini (raw)	323g
Tomatoes (cooked)	250g
Tomatoes (raw)	256g

Fruit

Apples (raw)	130g
Bananas (raw)	79g
Blueberries (raw)	124g
Cantaloupe (raw)	220g
Clementines (raw)	150g
Dried plums (pitted prunes)	28g
Grapes (raw)	99g
Pineapple (raw)	137g
Strawberries (raw)	234g
Tangerines (raw)	135g
Watermelon (raw)	237g

Tips and Suggestions

Protein Tips

How many times a day should I eat protein?

Your program divides protein servings evenly across breakfast, lunch, and dinner for best results. Eat your full protein prescription each day using foods from this list.

Do I measure before or after cooking?

Measure serving sizes after cooking. Cooking changes weight and volume.

What if I don't eat meat?

Meat is not required. Use eggs, and if you tolerate dairy, foods from the dairy column on this list to reach your daily protein servings.

What if I don't eat dairy?

That's a personal choice. Many people skip dairy today. Replace those servings with other protein foods on this list — meats, fish, and eggs.

Can I count beans, rice, or nuts as protein?

Even though beans, rice, and nuts contain protein, they are predominantly complex carbohydrates or fats. Use the meats, fish, eggs, and dairy on this list for protein servings.

How are egg whites listed?

Each egg whites serving on this list is a weighed portion that equals 8 grams of protein. Adjust volume to match the gram weight shown for your plan.

Grains & Starches Tips

How are grain and starch servings divided?

Your program divides grain and starch servings evenly across breakfast, lunch, and dinner for best results.

Do I measure before or after cooking?

Measure serving sizes after cooking. Cooking changes weight and volume.

What kind of bread can I use?

Any kind or brand works. Don't confuse muffins, croissants, and donuts for bread.

Can I count beans or rice as protein?

Even though beans and rice are predominantly complex carbohydrates, the protein they provide is additional protein. Count them here as grains or starches.

Why are potatoes and corn listed as starches?

Starch and vegetable servings are measured differently — a potato serving is not the same as a broccoli serving. People often pair potatoes with vegetables like broccoli or Brussels sprouts; keeping them separate keeps portions manageable.

Vegetable Tips

When can I eat my vegetable servings?

Vegetable servings can be eaten anytime, with or without a meal.

Do I measure before or after cooking?

Measure serving sizes after cooking. Cooking changes weight and volume.

Can I use fresh, frozen, or canned vegetables?

Yes.

Why are potatoes and corn not on this list?

Potatoes, corn, and peas are starches because their serving sizes would be unwieldy if measured as vegetables.

Fruit Tips

When do I eat my fruit servings?

Fruits are great in between meal bumps to the next pile of food. Easy and convenient.

Do I measure before or after cooking?

Measure serving sizes after cooking. Cooking changes weight and volume.

Can I use fresh, frozen, or canned fruit?

Yes to all, but canned fruit should be low or no sugar.

Are dried fruit and juice on this list?

Dried fruit can lead to overeating because it's dehydrated. Fruit juice can easily be stored as fat.

Getting Started

Salt

Using salt is a personal choice. Most people find when they eat less fat, they also eat less salt (chips, cheese, margarine, bacon, sausage, fast food)—you get the point.

Beverages

Coffee, tea, diet drinks and seltzer water are fine. Although they do not affect fat loss, you may want to avoid them for other health reasons. Water is the best drink in the house. A simple rule is to drink a glass with every meal and snack that you eat.

Measurements

For the most accurate servings size, use the gram-weight measurement from the second column. To convert gram-weight to ounces, divide the gram-weight by 28.

For example: from the Grain/Starch section on page 3

Divide 96 by 28 to get ounces. One ounce=28 grams. One small boiled potato is 3.4 ounces ($96/28=3.4$) Rounded to the nearest half ounce, the potato is 3 ½ ounces per serving.

For maximum energy and the quickest fat loss—

%¶ Eat all the servings recommended.

%¶ Alternate meals with fruit snacks.

%¶ Eat every two to three hours.

Helpful Tips

Foods in bold print are always the best choices.

Avoid light-print foods if you want to be healthy and lose fat.

Beside each food is the standard measurement (1 cup, 1 oz., etc.) The column titled “Weight” is the most accurate measurement of the two columns.

Measure the food after it is prepared the way you plan to eat it (cooked vs raw).

To Use This Plan

You need to know only the four numbers from this custom diet.

The four numbers on your printout are your personal servings of proteins, grains/ starches, veggies, and fruits.
