## Welcome

Congratulations! You have in your hands the most advanced diet available anywhere, at any price. It is the most individualized program available for losing fat. This diet will not work effectively for anyone else because it has been created just for you, using your LBM, your job, your lifestyle and your daily plan for exercise & activities.

How we did it. We determined your lean weight using sophisticated body composition testing. Then you told us about your job, lifestyle, exercise and activities. With this information, the computer generated this report. Included is your ultrasound body composition report that I call your Lean Body Analysis, your body composition history and the last two pages are your custom designed diet.

### Lean Body Analysis

Page two is the results of your body composition test. Although very few people want to know how fat they are, all of them want to how to lose fat. Our Lean Body Analysis page includes a breakdown of your current body composition with an emphasis on the good stuff. LBM (lean body mass) is used by the computer to calculate your metabolic rate (RMR). In addition, the Lean Body Analysis projects appropriate weight goals based on your current lean body mass.

### Food Plan

Page four is your custom-designed diet. How much food you need each day depends on how much LBM you have, your job, lifestyle and the type and amount of exercise you participate in. Based on the information you provide, this diet gives you the amount of protein, carbohydrates and fat you need per day to lose fat. It also tells you how much fat you can lose in eight weeks. And it shows you what your body requires at rest (your resting metabolic rate), for your workday and for one hour of each type of exercise.

### Servings

Page five is the servings page. No need to count calories or macros in this diet. The computer breaks down all the information from the table on page four and shows you the number of servings you need daily to have maximum strength & energy and to lose fat as fast as possible.

## Lean Body Analysis

### --TODAY--

|       |          |            |
|-------|----------|------------|
| LEAN  | 61.78 %  | 113.7 lbs. |
| FAT   | 38.22 %  | 70.3 lbs.  |
| TOTAL | 100.00 % | 184.0 lbs. |

| EXTREME   | HEALTHY    | AVERAGE    | BORDERLINE | AT RISK    |
|-----------|------------|------------|------------|------------|
| 9%-13.99% | 14%-20.99% | 21%-25.99% | 26%-31.99% | Over 32 +% |

According to the American Council on Exercise you are at risk based on your current fat percentage.

How much fat is right for each individual is a personal choice. How you look in the mirror is the only true judge of whether you have fat to lose. If you see more fat than you personally want, then exercise and follow your this plan until you reach your desired goals.

A female your height in good condition has 106 pounds or more of lean body weight.

**CONGRATULATIONS!** Your LBM is at or above the desirable amount. Even so, it's a good idea to exercise at least twice a week. If you want to gain lean or maybe just tone and shape your body, do so by participating in a weight-training program two to three times a week under the guidance of an experienced trainer. The table below tells us what you would weigh for the different health categories based on your current Lean Body Mass. Increasing or decreasing your LBM would increase or decrease the suggested body weight accordingly. For maximum success, feed your body properly. This diet will show you how much food you need daily for maximum results.

| EXTREME      | HEALTHY      | AVERAGE      | BORDERLINE   | AT RISK          |
|--------------|--------------|--------------|--------------|------------------|
| 125-130 lbs. | 131-143 lbs. | 143-152 lbs. | 153-166 lbs. | 167 lbs. or more |

Continue to monitor your body composition using Lean Body Analysis every 6 to 8 weeks to make sure you are losing only fat and not lean! If you want to lose fat, do so by following this diet as closely as you can. This plan allows you to lose all the fat you want to lose while increasing your strength & energy.

Personalized exclusively for: Sample Female

## Food Plan

The following food program contains a sophisticated calculation that is based on your individual lean body mass (LBM), and on your activities. This is the most individualized food program available for losing fat and getting more energy.

In eight weeks, you could safely lose 11.0 pounds of fat. On your information sheet, you indicated you plan to exercise a total of 6.00 hour(s) per week. 3.00 hour(s) of weights/racquet sports, 0.00 hour(s) of cardiovascular activities, 3.00 hour(s) of fat-burning activities

| TODAY |         |            | EIGHT WEEK GOAL          |            |
|-------|---------|------------|--------------------------|------------|
| LEAN  | 61.78%  | 113.7 lbs. | 65.71%                   | 113.7 lbs. |
| FAT   | 38.22%  | 70.3 lbs.  | <b>-11.0 lbs. of fat</b> | 59.3 lbs.  |
| TOTAL | 100.00% | 184.0 lbs. | 100.00%                  | 173.0 lbs. |

You project to lose an average of 1.3 pounds of fat per week. In addition, you could gain lean weight. Gaining lean weight will increase your strength and energy and offset your fat loss.

How much food you need each day depends on how much LBM you have. Also, it depends on your activity level and the type and amount of exercise you participate in. Based on the information you provided, the following table gives you the number of calories and the amount of protein, carbohydrates and fat you need per day to maintain your fat or to reduce body fat. Also listed is what your body requires at rest (your resting metabolic rate), for your workday and for one hour of each type of exercise.

|                                     | PROTEIN   |            | CARBS      |            | FATS      |            | TOTAL        |
|-------------------------------------|-----------|------------|------------|------------|-----------|------------|--------------|
|                                     | grams     | calories   | grams      | calories   | grams     | calories   | calories     |
| Maintain current fat %              | 71        | 284        | 219        | 876        | 115       | 1,032      | 2,192        |
| <b>Reduce current fat %</b>         | <b>71</b> | <b>284</b> | <b>219</b> | <b>876</b> | <b>44</b> | <b>392</b> | <b>1,552</b> |
