## Welcome

Congratulations! You have in your hands the most advanced diet available anywhere, at any price. It is the most individualized program available for losing fat. This diet will not work effectively for anyone else because it has been created just for you, using your lean body mass (LBM), your job, your day to day, and your weekly plan for weight training (WT), high heart rate aerobic activity (HHT), and low heart rate aerobic activity (LHR).

How we did it. We determined your lean weight using sophisticated body composition testing. Then you told us about your job, day to day, and exercise hours. With this information, the computer generated this report. Page two is your Projections, and the following pages are your custom-designed diet.

### Projections

Page two is your Projections page. It brings together your lean body mass (LBM), your job, your day to day, and the hours you plan to spend on weight training (WT), high heart rate aerobic activity (HHT), and low heart rate aerobic activity (LHR) — the same inputs the computer uses to build your food plan. The timeline table shows your projected fat and body fat % over the next eight weeks.

### Food Plan

Page three is your custom-designed food plan. We use your body composition information to determine your LBM (lean body mass), then factor in your job, your day to day, and how many hours per week you spend on weight training (WT), high heart rate aerobic work (HHT) such as running or hard cardio, and low heart rate aerobic work (LHR) such as walking or easy cycling. The page shows how much fat you can lose in eight weeks, compares your body today with your eight-week goal, and explains what happens when protein, carbohydrates, or fat are too high or too low — so the servings on the next page make sense without counting grams.

### Servings

Page four is the servings page. No need to count calories or macronutrients (protein, carbohydrates, and fat) yourself. The computer turns everything from page three into daily servings divided across breakfast, lunch, dinner, and snacks — so you have maximum strength and energy while losing fat as fast as this plan allows.

# Projections

The following food program contains a sophisticated calculation that is based on your individual lean body mass (LBM), and on your activities. This is the most individualized food program available for losing fat and building muscle. In your questionnaire, you indicated you plan to exercise a total of 6.00 hour(s) per week. 3.00 hour(s) of weight training, 0.00 hour(s) of cardiovascular activities, 3.00 hour(s) of fat-burning activities

The burn engine uses the information above to calculate your RMR (resting metabolic rate). In other words how much protein, carbohydrates and fat do use every day.

# Food Plan

We have been converting macros since 1982.

The challenge with macros is slippage.

**Step 4 — Turn targets into servings**

The computer calculated your daily food targets, then converted them into servings — protein, grains, vegetables, fruits, and fats.

You follow servings, not calories. The math is already done. Your job is to pick foods from the approved food list and hit your daily totals.

| THE MACROS    | TOO MUCH | TOO LITTLE        |
|---------------|----------|-------------------|
| PROTEIN       | GAIN FAT | LOSE LBM (MUSCLE) |
| CARBOHYDRATES | GAIN FAT | LOSE ENERGY       |
| FAT           | GAIN FAT | LOSE FAT          |

# Servings

NOTE: Always consult your physician before starting this plan or making any change in your eating habits.
